How much electricity does a 5kw Solar System produce?

On average, a 5kW solar system will produce around 20kWh per day, depending on your location and sunlight hours per day. You may find the system producing more in summer months, 25-30kWh, and less in winter, 15-20kWh. See also: How to reduce solar panel VOC (Important!) Is 1 kW enough to run a house?

How many kWh does a 1kW Solar System produce?

Typically, one "unit" of solar energy equates to 1kWh, which is what a 1kw system is capable of producing in 1 hour under perfect conditions. This means you would again use a very simple formula, system capacity (1kw) x hours of sunlight.

How many kWh does a solar panel produce a day?

2000 kWh per month equates to roughly 66 kWh per day. Again, let's go with 200-watt panels (as these are some of the most common), with around 4-hours of sun per day (just to be safe), you'll again be getting roughly 800-watt hours (0.8 kWh) per day, per panel. In order to produce 66 kWh per day of power, you'd need 82,200-watt solar panels.

Example: An optimally tilted, 85% efficient, north-facing 5kW solar system in Sydney, for example, would produce about $(3.5 \text{ PSH} \times 5\text{kW} \times 85\%) = \sim 15\text{kWh}$ of power on a day in the peak of winter, whereas in the summer output from the same 5kW solar system would be around $(6.2 \text{ PSH} \times 5\text{kW} \times 85\%) = \sim 26\text{kWh}$. (Figures are only to be taken as rough estimates.)
