

# Annual power generation of wind power in my country

How much wind power does the world need?

The world's installed wind power capacity now meets around 10% of global electricity demand - another important milestone. More than ten countries now have a wind power share of more than 20%, led by Denmark, which generates an astonishing 56% of its electricity from wind.

Which countries generate the most electricity from wind?

Germany, the Netherlands, Portugal, the UK and Uruguay are among the countries that generate around a third or more of their electricity from wind. These countries demonstrate that the world as a whole can achieve a 40-50% share of wind power in total electricity generation, as outlined by the WWEA in a long-term scenario.

Which countries produce the most wind power in 2022?

Denmark produced 55% of its electricity from wind in 2022, a larger share than any other country. Latvia's wind capacity grew by 75%, the largest percent increase in 2022. In November 2018, wind power generation in Scotland was higher than the country's electricity consumption during the month.

How many GW of wind power are there in 2022?

The worldwide total cumulative installed electricity generation capacity from wind power has increased rapidly since the start of the third millennium, and as of the end of 2022, it amounts to almost 900 GW.

How much wind power does the United States have?

In another major milestone, the United States passed 150 Gigawatts of total wind capacity, but the market was much weaker than in the previous year, adding only 6.4 Gigawatts - much less than in 2022 and in 2021, when 13.7 GW were added, more than double the capacity of 2023.

Which country has the most wind power installed in 2023?

In the past years, wind energy installations have been growing rapidly. In 2023, the total wind power capacity installed worldwide surpassed one terawatt, growing by more than 100 gigawatts in comparison to the previous year. China is the leading country in terms of cumulative wind installations and newly installed wind power capacity.

From GWEC's Global Wind Report 2024. The report highlights increasing momentum on the growth of wind energy worldwide: Total installations of 117 GW in 2023 represents a 50% year-on-year increase from 2022. 2023 was a year ...

Wind and solar PV are based on a fixed generation fleet (except for the United States, Japan and India). Hydro is based on annual capacity factors. Considers 1991-2019 for hydro, 1986-2015 ...

# Annual power generation of wind power in my country

"Data Page: Annual percentage change in wind power consumption", part of the following publication: Hannah Ritchie, Pablo Rosado and Max Roser (2023) - "Energy". Data adapted from Energy Institute.

In 2020, the country's average wind power utilization hours were 2097 Meanwhile, from the statistics of China's wind curtailment data in recent years, the situation of wind abandonment and power ...

Their share of net public power generation increased to 49.6 percent (up from 45.6 percent in 2021), and their share of load was 50.3 percent. In addition to net public power generation, total net power generation includes ...

Today more than 72,000 wind turbines across the country are generating clean, reliable power. Wind power capacity totals 151 GW, making it the fourth-largest source of electricity generation capacity in the country. This is enough wind ...
