I've got an MPPT that can push 200A to my 48V lithium batteries. But it will push at higher than 48V to charge the batteries, so I'm assuming the breaker between my MPPT and batteries should be rated for 60VDC? Local solar shop sold me 48V 200A breakers and I only realized it after the fact that this might be an issue.

You need a lot of batteries, usually at least 4X 12-v batteries or other 24/48v banks. This is quite expensive when compared to a 12v system which you can do with 1 or 2 car batteries. Expansion in capacity of the system is expensive - if you have 4X batteries in series to be a 48-volt system you need another 4 to increase the capacity.

48V batteries are increasingly popular in various applications, including electric bikes, solar energy storage
