What is Bolivia's energy mix?

Bolivia's overall energy mix is dominated by fossil fuels, with natural gas (50%) and petroleum products (31%) supplying most of the country's energy in 2020. In 2021, Bolivia's national electricity agency ENDE announced its intention to generate up to 80% of the country's power from renewable sources by 2025.

What type of energy system does Bolivia use?

Similar to the country's total energy system, the power sector relies heavily on natural gas(AEtN,2016). The electricity network in Bolivia is broken into two classifications: the National Interconnected System (SIN) and the Isolated Systems (SAs).

What is the energy sector in Bolivia?

The Bolivian energy sector, which is almost completely nationalized, is headed by the MHE (Ministerio de Hidrocarburos del Estado Plurinacional de Bolivia) whose mission, according to their website, is to create policies that promote the integrated development of the energy sector in a manner that is equitable and in harmony with Mother Earth.

What are the heating demands in Bolivia?

Residential heating demands in Bolivia are quite low, though they do notably increase throughout the transition as access to energy services increase, except for biomass for cooking, which is phased out by the end of the transition. Heating demands are projected to increase from 52 TWh in 2015 to 205 TWh in 2050. Fig. 12.

Does Bolivia have a lithium resource?

Given that Bolivia's PT region is home to the largest lithium reserve in the world(Sauer et al.,2015), development of cost of Bolivia's own lithium usage as extraction of this resource develops may influence decision makers regarding lithium applications in the Bolivian energy system.
