

What is the main energy source in Laos?

As of 2018, most of primary energy comes from coal (60.7%), followed by hydropower 30% and oil 18%. Hydropower is a significant resource in Laos, with 22.5 TWh electricity generated in 2018. However, the national electrification rate was 94.2% in 2017.

How much coal does Lao PDR use?

In the same year, Lao PDR consumed 4.5 Mtoe of coal, mainly in thermal power plants such as the Hongsa Thermal Power Plant, the country's first and largest coal power plant, which began operating in 2015. Thus, coal demand increased sharply from 2015 onwards.

What type of electricity is used in Laos?

Renewable electricity here is the sum of hydropower, wind, solar, geothermal, modern biomass and wave and tidal power. Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important source in lower-income settings. Laos: How much of the country's electricity comes from nuclear power?

To practice your endurance sport, BRIX energy gel provides a source of energy easily absorbed by your body, and this, from completely natural ingredients. Brix can help increase your ...
