

Home photovoltaic panels for three tiled houses

What is the difference between integrated solar panels and solar tiles?

Integrated solar panels sit in the roof covering, but are often the same size as conventional framed solar panels - meaning they're still visible - while solar tiles are usually the same shape and colour as the tiles they are replacing.

What are integrated solar panels?

Integrated solar panels, also known as in-roof solar panels, sit flush with the roof. They replace roof tiles, are 100% waterproof, and generate solar energy. Aesthetically pleasing, lightweight, and robust. Cost-effective for new constructions or roof replacements. Likely to receive planning permission.

How do I choose a solar panel for my roof?

Decide on how much of your electricity bills you want to cover with your solar panel usage -- this can be anything from 10-100%. Your decision will affect the system size and costs. Calculate how many solar panels fit your roof. An average solar panel takes about 1.44 m² of roof space. Don't forget to include at least 30 cm from the roof's edge.

Are in-roof solar panels better than traditional solar panels?

In-roof solar panels are aesthetically pleasing and seamlessly blend with the roofline. However, their efficiency is usually 5-10% lower than regular solar panels. Do traditional solar panels look bulky and less attractive? Then, consider installing integrated solar panels instead.

What are the different types of integrated solar panels?

In-roof frames: These integrated solar panels replace sections of the roof tiles or slates, sitting flush with the underlying roof structure. These frames are commonly used in both home renovations and new builds.
Bespoke integrated panels: These solar panels are specifically designed and manufactured for in-roof installation.

Where to buy solar panels in the UK?
