This document discusses the design aspects of standalone solar PV systems. It begins by providing background on solar PV technology and India's solar energy potential. The key components of a standalone solar system are then explained - solar modules, batteries, charge controller, inverter.

How does a solar PV system work?

Solar PV System Solar energy is radiant light and heat from the sun that is converted into electricity through photovoltaic panels. Photovoltaic panels use silicon to directly convert sunlight into electricity. A solar PV system may be connected to the electric grid to sell excess power back to the utility company, as measured by a net meter.
