How to measure the insulation resistance of a solar PV system?

The IEC62446-1 standard describes two methods for measuring the insulation resistance of a solar PV system.

1. To short the positive and negative electrodes of the PV string, and measure the insulation resistance between the shorting point and earth. 2.

What is an example of PV panel insulation resistance measurement circuit?

One example of PV panel insulation resistance measurement circuit is shown in Figure 2. Assuming that the rated voltage of the individual PV panel is 1000 Vdc during bright sunny day, good PV panel insulation resistance recorded is 2 MO and bad insulation resistance is 100 kO.

How do you measure the insulation resistance of a PV inverter?

One method is to measure the insulation resistance of each panel with respect to ground. This indirectly also measures the leakage current. The measurement is usually done before the turning on of the PV inverter or at least once or twice per day. For a 1000 Vdc system, normal practice requires insulation resistance to be more than 1 MO.

How to measure the dynamic impedance of a PV module?

In this document we show a method how to measure the dynamic impedance of a PV module using the frequency response analyzer Bode 100. For simplification the impedance of the solar cell is measured in a dark environment. The operating point is then chosen by applying an external DC1 voltage bias.

How to measure the insulation resistance of a PV string?

1. To short the positive and negative electrodes of the PV string, and measure the insulation resistance between the shorting point and earth. 2. Measuring the insulation resistance between the positive electrode and earth and between the negative and earth separately without shorting.

How to measure AC2 impedance of a PV module?

In this document we show how the AC2 impedance of a PV module can be measured using the Bode 100 in conjunction with the J2130A DC Bias Injector from Picotest. The figure below shows a simplified equivalent circuit model of a photovoltaic module. The impedance of the examined photovoltaic module is very high (in the range of several 100 kO).
