How does Iceland use energy?

Among energy wonks, Iceland is also well known for using its abundant renewable energy, and especially for tapping the volcanic roots of the island in developing its geothermal resources. Iceland today generates 100% of its electricity with renewables: 75% of that from large hydro, and 25% from geothermal.

Does Iceland use geothermal energy?

Equally significant, Iceland provides 87% of its demand for hot water and heat with geothermal energy, primarily through an extensive district heating system. Altogether, hydro and geothermal sources meet 81% of Iceland's primary energy requirements for electricity, heat, and transportation. This must be a record in the modern era.

Does Iceland have a future with renewables?

Iceland not only points to its success in meeting its own needs with renewables but also aggressively markets its renewable resources to energy-intensive industries. Now it wants to go even further—specifically, to the British Isles.

Is Iceland a geothermal country?

Iceland is a leader in geothermal development and exports its technical expertise worldwide. The country, along with the Philippines and El Salvador, is among countries with the highest penetration of geothermal energy in electricity generation worldwide.
