What is the largest wind turbine in the world?

The MySE 16-260 earns its largest-ever tag thanks to its rotor diameter of 260 meters (853 feet) and its swept area of 53,902 square meters (580,196 square feet); it's also the most powerful wind turbine we've seen so far, offering 16 megawatts of power.

How big is a wind turbine?

A 1.5 (MW) wind turbine of a type frequently seen in the United States has a tower 80 meters (260 ft) high. The rotor assembly (blades and hub) measures about 80 meters (260 ft) in diameter. The nacelle, which contains the generator, is 15.24 meters (50.0 ft) and weighs around 300 tons.

Is the world's largest wind turbine going green?

The MySE 16-260 in its turbine field. (China Three Gorges Corporation) News about switching to greener energy sources is always good news, and this certainly counts: The world's largest wind turbine constructed to date is now up and running and contributing to the power grid in China.

What is the average rotor diameter of a wind turbine?

In 2023, the average rotor diameter of newly-installed wind turbines was over 133.8 meters (~438 feet)--longer than a football field, or about as tall as the Great Pyramid of Giza. Larger rotor diameters allow wind turbines to sweep more area, capture more wind, and produce more electricity.

What is the world's largest single-capacity offshore wind turbine?

Mingyang Smart Energy said last week that it's installed "the world's largest single-capacity offshore wind turbine" in a project in Hainan, China. The turbine delivers a power output of up to 20 MW, besting its previous 18 MW model from 2023.

What is the world's first offshore wind turbine?

Three Gorges Energy has connected the world's first 16-megawatt monster offshore wind turbine to the power grid. With a mind-boggling 260-meter (853-ft) rotor diameter, this towering colossus will supply clean energy for about 36,000 Chinese homes.
