In the video below, you'll see Lin Linguoer use a simple (probably A/C) stick welder as she takes a hydroelectric turbine and generator that looks like it's been sitting at the bottom of a lake and turns it into a working unit, all while wearing her trademark blue and yellow denim jumpsuit. Most makers would have used a MIG or TIG welder, but Lin uses a stick welder.

Are solar-powered generators a good idea?

With all the environmental issues the world continues to face, going solar is becoming a must. And solar-powered generators are just one of many new kinds of solar technology that can help cut emissions and costs. They are a lifesaver for portable power - whether that's for an off-road adventure or to reduce your reliance on the grid.

What is a solar powered generator?

What is a solar-powered generator? A solar-powered generator is a system that converts sunlight into electricity using attached solar photovoltaic (PV) panels. Unlike traditional generators that run on fossil fuels, solar generators produce clean, renewable energy without emitting greenhouse gases.

How does a solar-powered generator work?

A solar-powered generator typically has four components: Like a household solar array, the PV panels - which are often separate (sometimes folding) add-ons connected to the generator unit - absorb sunlight and convert it into electricity to be used instantly or stored in the generator's batteries.
