Do vertical storage solutions increase workforce productivity?

In fact, industry studies have shown that vertical storage solutions can increase workforce productivity by up to 85%, as one worker is able to handle the same volume of work previously performed by multiple operators. VLMs deliver the items to the operator location where the picking or replenishment operations take place.

How does vertical storage work?

Vertical storage solutions can also easily solve this problem, as they automatically deliver parts to the picker, rather than having the picker go and locate the parts within long aisles of shelving and cabinets. Walking time for parts retrieval is reduced up to 70% when compared to static shelving.

Items are delivered to the operators with a simple touch on the user-friendly copilot controller or the scan of a barcode.
