

## National Standards for Solar Power Generation Technology

What are the ASTM standards for solar energy conversion?

The PV standard developed by ASTM technical committee is E44.09Photovoltaic electric power conversion. The ASTM standards related to PV technology is shown in Table1. Table 1. ASTM standards for PV installations. Related to solar energy conversion- addresses the solar energy conversion into other forms of energy by various means.

Why are standards important in the solar PV industry?

Box 9. THE IMPORTENCE OF STANDARDS IN THE SOLAR PV INDUSTRY Standards are essential for ensuring safety and quality in the solar PV sector, especially because the reliability, performance and durability of solar equipment is critical to ensuring smooth operation of solar power plants.

Should guidance on solar PV be included in the National Policy Statement?

The solar industry very much welcomes the addition of guidance on solar PV to the National Policy Statementfor renewable energy infrastructure. However, there are several provisions which could be strengthened, which we have outlined below.

How many standards are there for photovoltaic systems?

There are nearly 80 standardsapplicable to photovoltaic and five working groups in IEC TC82. For necessary safety requirements 'Quality and Standards' technologically need to be revised and up to date.

What are the National PV standards?

Though many countries have their own national PV standards, the majority are based on the standards developed by International Electrotechnical Commission (IEC) established in the year 1995 which is the world's leading standards organization that develops and publishes the international standards for electrotechnology.

Should a target for solar generation be included in the NPS?

This equates to roughly 40GW of solar by 2030, and the solar industry body, Solar Energy UK, has demonstrated in its 2021 report "Lighting the Way" that this target is possible. We recommend that a target for solar generation should be included in the NPS.
