

Nauru solar panel farms

Does Nauru need solar power?

“Now Nauru's power generation mainly relies on diesel. That's expensive and would pollute the environment,” said John Scott, who has been working for the project since 2022. “There is a lot of sunshine here and it's good for solar power. I believe electricity supply here will be much better when the project is completed,” Scott told Xinhua.

Who will implement solar project in Nauru?

The executing agency will be the Department of Finance and Sustainable Development. The implementing agency for solar component of project will be the Nauru Utilities Corporation (NUC). NUC will establish a project management unit within their existing organisational structure to implement the project.

How will Nauru's solar power system work?

The system will be fully integrated and automated with the existing diesel generation (17.9 MW installed capacity currently manually operated) to optimize solar energy use, to enable optimal BESS charging/discharging and to provide optimal shut off of the diesel engines. This will reduce Nauru's over reliance on diesel for power generation.

How will ADB support the Nauru solar power development project?

ADB also provided GoN support to prepare a Feasibility Study for the recommended Nauru Solar Power Development Project which will comprise of a 6 megawatt PV plant coupled with a 5 megawatt /2.5 megawatt-hour battery energy storage system coupled with a SCADA installation.

What is the impact of Nauru energy project?

The project impact is a reliable, affordable, secure, and sustainable energy supply to meet the socio-economic development needs of Nauru. The outcome of the project will be that NUC, the state-owned power and water utility, will supply reliable and cleaner electricity.

Is Nauru Utilities Corporation a good company?

In particular, Nauru Utilities Corporation has a well-functioning procurement unit. They have participated in ADB funded Tenders for Power Generation Units, and regularly invite goods and works bids through Tenderlink.

The Republic of Nauru is an island of just 21 square kilometres, with more than 9,500 citizens, that is highly dependent on imported fossil fuels for transport and power generation. The 500kW solar PV plant bolsters energy resilience by contributing electricity to the national grid.

The Republic of Nauru is an island of just 21 square kilometres, with more than 9,500 citizens, that is highly dependent on imported fossil fuels for transport and power generation. The 500kW solar PV plant bolsters

Nauru, with its beautiful tropical scenery and brilliant sunshine, is endearingly dubbed as a 'pearl of the Pacific.' In the southwestern part of the island nation, rows of blue photovoltaic panels are neatly arranged close to the azure sea, reflecting the dazzling tropical sunlight.

We are currently overseeing the installation of a 6MW ground mounted solar farm which will be in operation by the end of 2023, improving Nauru's Renewable Energy production from 12% to 48%. Our goal is to reach 100% Renewable Energy production by 2030.

The Nauru Solar Power Development Project - Battery Energy Storage System is being developed by Nauru Utilities. The project is owned by Nauru Utilities (100%). The key applications of the project are renewable energy integration and grid support services.
