

What is New Caledonia's energy mix?

New Caledonia's energy mix consists of 97.7% fossil fuels, including 54.1% petroleum products (mainly fuel oil and diesel), 43.6% coal, and 2.3% renewable energies. The metallurgical industry consumes 61.2% of the total energy consumption of the territory.

What will TotalEnergies do in New Caledonia?

Noumea, December 20, 2021 - TotalEnergies will develop a series of photovoltaic and energy storage projects in New Caledonia in order to deliver decarbonized electricity via a 25-year renewable power purchase agreement (PPA) for the industrial operations of mining and metallurgy consortium Prony Resources New Caledonia.

What is the New Caledonia energy transition scheme?

Guided by the Agence Calédonienne de l'Energie (ACE), the New Caledonia Energy Transition Scheme (STENC) defines the island's energy policy up to 2030.

What is New Caledonia's main energy source?

New Caledonia depends on imports for 96% of its energy needs, mainly used in mining operations. Imports of coal and oil products remain the main energy sources of the territory.

Does Prony resources New Caledonia support decarbonization?

"Prony Resources New Caledonia's commitment to decarbonization is both ambitious and pioneering in the industry. We are very proud to support their energy transition, and that of New Caledonia," said Thierry Muller, CEO of TotalEnergies Renewables France. "As industrial firms, we think and act responsibly."

What is the role of the Caledonian Energy Agency?

The Caledonian Energy Agency's role is to implement the energy transition scheme set out by the government and to contribute to the development of the electrical system. It also promotes the rational use of energy and the development of renewable energies.

By combining solar energy and energy storage to replace electricity generated from coal, TotalEnergies is

demonstrating its ability to provide a sustainable energy solution to Prony Resources...

AMS Instrumentation & Calibration Pty Ltd (AMS) has been in existence for more than 30 years supplying calibration equipment and industrial instrumentation to all industries. With more than 225 years of instrumentation experience of staff, we are sure we can offer our customers a solution to their problems.

New Caledonia's energy mix is 97.7% fossil fuel, including 54.1% petroleum products (mainly fuel oil and diesel), 43.6% coal, and 2.3% renewable energies. This high energy dependence is directly linked to the metallurgical industry which consumes 61.2% of the total energy consumption of the territory.

Energy Pool and Enercal are pioneering advanced microgrid solutions to support New Caledonia's transition from diesel generators to zero-carbon energy sources like PV and biofuels. A smart energy management system (EMS) to maximize ...

TotalEnergies will develop a series of photovoltaic and energy storage projects in New Caledonia in order to deliver decarbonized electricity via a 25-year renewable power purchase agreement (PPA) for the industrial operations of mining and metallurgy consortium Prony Resources New Caledonia.

Opportunity struck again when a call out of the blue led me to a new career in energy assessments and demand side energy savings for various industrial companies. Jackpot! Processes galore and more learning! That then led to an interest in waste heat recovery. After much research, a new technology (Well, not new).
