

Does aluminum alloy need aging heat treatment for solar photovoltaic brackets?

The commonly used aluminum alloy series for solar photovoltaic brackets need to undergo aging heat treatment to achieve the required strength. China Aluminum strictly controls the solution treatment and aging heat treatment process to ensure the required strength of the aluminum alloy brackets.

What types of solar panels does Chalco stock?

Chalco stock various aluminum extruded solar panel frames and photovoltaic support aluminum alloys, with a variety of finishes to choose from. If the existing products are not suitable for your needs, we can also customize them according to customer requirements.

Is aluminum a good material for solar panels?

With its advantages of light weight, high strength, corrosion resistance and durability, aluminum is widely used in building solar panel frames and photovoltaic supports. Research shows that aluminum is the most widely used material in solar photovoltaic (PV) applications, accounting for more than 85% of most solar PV modules.

Why do solar panels need anodized aluminum profiles?

Because the panel frame is exposed to the natural environment, it has high requirements for corrosion resistance. Chalco provides anodized aluminum profiles to further enhance the corrosion resistance of solar aluminum alloy frames.

What are the advantages and disadvantages of aluminum solar panels?

And with its good conductivity, aluminum has gradually replaced the position of silver, copper and stainless steel in the solar panels. Compared with traditional materials, aluminum cooling speed is fast, which has a significant advantage in solar PV, because the increase of PV cell temperature will reduce the power generation efficiency.

Why are solar panels made of aluminum?

And because of its good conductivity, aluminum has gradually replaced silver, copper and stainless steel in the position of solar panels. Quick Quote Solar cell chips, typically silicon-based, are mainly linked using aluminum.
