

What are printed solar cells?

Printed solar cells are highly efficient, flexible, and decreasing in cost. Unlike traditional silicon panels, which are rigid and heavy, solar cells could be deployed in previously impossible ways to generate energy from the sun. This includes being adhered to buildings, vehicles, clothing and wearables.

Can solar cells be printed with inkjet printing?

In this review, the recent advances in inkjet printing with the deposition of different layers of various types of solar cells are summarized in detail and perspectives for the future development of printed/flexible solar cells are covered.

Can printed solar cells improve efficiency?

However, scaling up production while maintaining efficiency has long been a hurdle for printed solar cell technology. Many researchers have only achieved efficiency levels of one or two per cent with a full printed flexible solar panel.

What are screen-printed solar cells?

Screen-printed solar cells were first developed in the 1970's. As such, they are the best established, most mature solar cell fabrication technology, and screen-printed solar cells currently dominate the market for terrestrial photovoltaic modules. The key advantage of screen-printing is the relative simplicity of the process.

What are back-contact solar cells?

This review provides a comprehensive overview of back-contact (BC) solar cells, commencing with the historical context of the inception of the back-contact silicon (BC-Si) solar cells and its progression into various designs such as metallization wrap through, emitter wrap through, and interdigitated configurations.

Can flatbed screen printing be used for metallization of solar cells?

Sebastian Tepner and Andreas Lorenz contributed equally to this work. This paper presents a comprehensive overview on printing technologies for metallization of solar cells. Throughout the last 30 years, flatbed screen printing has established itself as the predominant metallization process for the mass production of silicon solar cells.
