What is a PV panel?

Panel: A group of modules that is the basic building block of a PV array. Panel is a term used for a group of modules that can be packaged and pre-wired off-site. The size of the panel (or large modules) is often related to how much weight and size two workers can effectively handle on a roof surface, such as you see here.

How do I add a solar collector?

Position and size PV panels by following instructions in the Adding Solar Collectors topic. To access the properties of the PV panel first navigate to the solar collector object by double-clicking on the graphical object from building level or single-click on the solar collector item in the Navigator.

What is a PV module?

Module: A group of PV cells connected in series and/or parallel and encapsulated in an environmentally protective laminate. The PV module is the smallest package that produces useful power. The process involved in manufacturing these modules requires high precision and quality control in order to produce a reliable product.

When can new PV modules be added?

New PV modules can be added at any time. Photovoltaic (photo = light; voltaic = produces voltage) or PV systems convert light directly into electricity using semi-conductor technology. (@10% efficiency) Thermal systems (hot water, pool heaters) produce heat from the sun's radiation (@+40 % efficiency) Large difference in value of energy types.

How many volts does a PV module produce?

Cell: The basic photovoltaic device that is the building block for PV modules. All modules contain cells. Some cells are round or square, while thin film PV modules may have long narrow cells. Cells are too small to do much work. They only produce about 1/2 volt, and we usually need to charge 12 volt batteries or run motors.

Can a PV system be installed on a house?

PV is very modular. You can install as small or as large a PV system as you need. Example: One can install a PV module on each classroom for lighting, put PV power at a gate to run the motorized gate-opener, put PV power on a light pole for street lighting, or put a PV system on a house or building and supply as much energy as wanted.
