

How are PV panel cooling system boundary conditions applied during liquid cold plate topology optimization?

According to the above geometric and mathematical models, PV panel cooling system boundary conditions are applied during liquid cold plate topology optimization to best approximate actual PV panel cooling needs. Objective function weighting factors  $w_{TH}$  and  $w_{FL}$  are taken as 0.7 and 0.3, respectively.

What is Topology-optimized PV panel cooling?

Topology-optimized liquid-cooled panels with more uniform flow path distribution. Topology-optimized cold plate increases net PV plate power by 3%-19.7%. Continuous advances in concentrating photovoltaic (CPV) panel efficiency are increasingly affected by cell temperature. Improving PV panel cooling performance is critical.

Does flat plate photovoltaic/thermal (pv/T) solar collector produce both thermal energy and electricity?

Flat plate photovoltaic/thermal (PV/T) solar collector produces both thermal energy and electricity simultaneously. This paper presents the state-of-the-art on flat plate PV/T collector classification, design and performance evaluation of water, air and combination of water and/or air based.

Is flat plate pv/T solar collector a good choice for low-energy applications?

From the literature review, it is obvious that the flat plate PV/T solar collector is an alternative promising system for low-energy applications in residential, industrial and commercial buildings. Other possible areas for the future works of BIPVT are also mentioned.

## 1. Introduction - technology overview

What is a flat plate pv/T collector?

Flat plate PV/T collector classification. Aste et al. mentioned that, amongst all types of PV/T solar collectors, the most popular PV/T collector is the PV/T air collector; nevertheless, this type of collector has less applications compared to the water collectors. Zondag et al. has elaborated the PV/T collector types.

What is a flat plate pv/T water type?

For flat plate PV/T water type, it can be distinguished by the water flow pattern usually installed underneath the flat plate and can be in sheet and tube, square/rectangular or round shape.
