

The e-mesh Energy Storage modular solutions are engineered, assembled and factory-tested by Hitachi Energy before delivery, ready for speedy and easy energization on-site while reducing site-based construction risks. The solutions can be ...

Embedding standards and incorporating smart capabilities in household appliances and grid-edge technologies in new buildings has proved to be a useful way to speed up adoption of energy-saving technologies and reduce consumption.

The Grid Edge Service provides in-depth analysis on the different technologies transforming the electric grid and customer energy management. The service offers: Topical Market Reports ...

DOE is expanding a flexible approach to accelerate the transition to a modern grid edge and respond to rapidly evolving technology demands. Increased engagement with industry, policy makers, regulators, and technology developers enables DOE to ...

Distributed energy resources (DERs), electrification, and the integration of a variety of grid edge technologies are changing the way the grid is planned and operated. Utilities are engaging with customers in new ways and developing new business models to meet emerging grid needs and regulatory requirements.

The Grid Edge Service provides in-depth analysis on the different technologies transforming the electric grid and customer energy management. The service offers: Topical Market Reports and Insights: Through a blend of quantitative and qualitative analysis, our team provides insight into utilities responses to distributed energy resources. We ...
