What is V2G technology?

The introducing the vehicle to grid(V2G) technology as mobile energy and its integration with the RESs and smart grid are the most efficient system to eliminate the possible problems in the demand and supply. In recent decades,many studies have focused on this technology and different aspects of this system have been analyzed.

Can V2G be used in a micro-grid?

The V2G is capable of unidirectional or bidirectional power flow. This technology includes the DC-DC bidirectional converter and AC-DC bidirectional converter which will share the common DC bus. The V2G technology implementation in the power grid will face many challenges and can be avoided by implementing it in the micro-grid.

How can V2G technology support res?

So in this situation,by integrating V2G technology with RESs and providing necessary fundamentals and techniques,the system can make ancillary energy and support the RESs and deliver uniform and uninterrupted power to the grid.

What are the social aspects of implementing a V2G system?

Another social aspect of implementing the V2G system is analyzing the security and efficiency of the communication system. One of the most common worries among the people about joining in the V2G system is sharing the data and information around their location,driving patterns,charging locations etc. with aggregators and central power units.

What are the three scenarios of V2G?

In Ref. , three scenarios of V2G are discussed: workhour price-taker scenario, an arbitrage-guided scenario with perfect information, and a user-defined electricity selling price scenario that each of them has its own procedure for the vehicles to charge and discharge themselves according to the power demand.

What is V2G & V2B EV?

So,the concept of vehicle-to-grid (V2G),vehicle-to-building(V2B) and vehicle-to-vehicle (V2V) or electrification of transportation system are introduced in order to solve the current obstacles and problems in the power grid. In recent studies there are three structures for implementing the grid connected EVs.
