

Smart Microgrid Exam

What is the difference between a microgrid and a smart grid?

A microgrid consists of LV distribution systems having wind, solar, etc or any combination as small DG units. A smart grid may or may not be a combination of microgrids. microgrids are developed to supply local small scaled loads. A smart grid can supply large loads with the help of communication and automation technologies

What is the Smart Micro Grid Controller project?

The Smart Micro Grid Controller project develops intelligent equipment for microgrids, featuring integrated control and safe operation functions. This project aims to support energy developers and producers in using their investments more efficiently.

What is a smart grid course?

It introduces state-of-the-art smart grid technologies like electric vehicles, AC/DC microgrids, energy storage, phasor measurement unit, cyber security, etc. In addition, the course talks about the trends, modeling, planning, operation, and control of energy storage technologies.
