

How can the Italian smart energy technology supply chain benefit?

In this context, the Italian smart energy technology supply chain can benefit from the notable development opportunities offered by the energy transition. In several segments, Italian companies possess skills, expertise and industrial capabilities that make them competitive in the international arena.

How to improve the Italian energy strategy?

Some of the authors of the present work have proposed a method for improving the Italian energy strategy in order to achieve the target of at least 55% greenhouse gases GHG (greenhouse gases) emission reductions by 2030 [45], by applying the EnergyPLAN software.

How can Italy benefit from the energy transition?

The energy transition, an industrial opportunity for Italy. The increase of renewable generation capacity needed to meet the EU decarbonization and energy independence 2030 targets together with the further development of the Italian supply chain can bring economic benefits of up to 361 billion EUR and create up to 540.000 new jobs.

What are Smart Energy Systems & Technologies?

Smart energy systems and technologies are evolving fast to follow and drive the progress of scientific and industrial developments in the power and energy system area and in related fields.

Is the Italian energy system decarbonised?

As a case study, the decarbonisation of the Italian energy system has been analysed. The inputs for the H2RES model have been considered by converting the EnergyPLAN model developed in Ref. [49] and also applied in Ref. [50].

Henrik Lund gave the 10th anniversary keynote speech on New insights into Smart Energy Systems - Theory, Concepts and Applications. View more. Henrik Lund is MSc Eng and Professor in Energy Planning at Aalborg University, Denmark. He holds a PhD in the Implementation of Sustainable Energy Systems (1990), and a Dr Techn in Choice Awareness ...

OLD-GENERATION DISTRICT HEATING SYSTEMS: FIRST RESULTS FROM THE TEMPO DEMONSTRATION PROJECT IN BRESCIA (ITALY) 6th International Conference on Smart Energy Systems Aalborg, 6-7 October 2020 Paolo Leoni, Aurelien Bres (AIT Austrian Institute of Technology GmbH, Vienna, Austria) Ilaria Marini, Alessandro Capretti (A2A Calore e Servizi, ...

As it pertains to intra-generational equity, smart retrofit of buildings and building-integrated renewable energy system will result in increased thermal comfort, tackling differential energy burdens, reduced energy poverty, ...

Smart energy city (SEC) has emerged as the latest urban development strategy in European countries. It can vastly accelerate cities' decarbonisation efforts, which can have several co-benefits.

evaluate the energy system response to an ever-growing renewable installed capacity and electrification of transport sector. The focus of this analysis is on providing possible recommendation...

Per questo il contributo di Smart Energy sar  decisivo per garantire un'opportunit  di risparmio economico, un'offerta trasparente nella selva del Mercato Libero, un'opzione semplice e digitale in grado di facilitare la gestione ...

This paper proposes a method for energy planning based on the smart energy systems approach. The case study analysed deals with the elaboration of guidelines for the Italian NECP improvement in order to achieve at least 55% GHG emission reductions by 2030.

Distribution key in energy transition. In Italy, the distribution grid connects more than 30 million households and seven million commercial and industrial users and supplies more than 80% of the electricity consumed. ...
How vehicle to grid can drive down EU energy system costs. Dec 06, 2024. Tech Talk | The digital utility of the future. Dec ...

Guglielmo concluded by pointing to Italgas's commitments to reducing methane emissions - a 30% greenhouse gas emission reduction is targeted by 2027 - with promotion of a common approach through Gas Distributors for Sustainability (GD4S) and membership of the Oil and Gas Methane Partnership 2.0 (OGMP) with a "Gold standard" award for its 2021 reporting.

This handbook analyses and develops methods and models to optimize solutions for energy access of industry and the general world population in terms of reliability and sustainability. It focuses on improving the performance measures of the energy systems. It brings together state-of-the-art research on reliability enhancement, intelligent development, ...

Welcome Message. Welcome to the official homepage of the 2025 IFAC Workshop on Smart Energy Systems for Efficient and Sustainable Smart Grids and Smart Cities (SENSYS 2025), set to take place in Bari, Italy, from June 18 to June 20, 2025.. Hosted under the auspices of the International Federation of Automatic Control - IFAC, this workshop will explore advanced ...

Italy's burgeoning battery market. According to Aurora Energy Research in their third European Battery Markets Attractiveness Report, Europe is on the brink of a much-needed surge in battery energy storage, with Great Britain and Italy two of the three leading markets for battery storage investment on the continent.

A companion journal to ENERGY, the international journal. Smart Energy is an international, multi-disciplinary journal with a focus on smart energy systems design, analysis, planning and modelling. The

journal aims to be a leading platform and an authoritative source of information related to the green transformation of energy supply and demand systems into future smart ...

Presented in Fig. 4, the leading countries by the accumulative number of documents are the USA (7827), China (6156), and India (3396). The other leading places in the top ten countries include Italy, Germany, the UK, South Korea, Canada, Spain, and Japan. Regarding the Scopus database, the searched term "smart energy systems" provides the ...

The Smart Energy System Concept. The Smart Energy System concept is essential for cost-effective 100% renewable energy systems. The concept includes a focus on energy efficiency, end use savings and sector integration to establish energy system flexibility, harvest synergies by using all infrastructures and lower energy storage cost.

A framework for planning and design of smart multi energy systems is proposed. o The multi-objective optimization method is based on indicators and Pareto analysis. o Sustainability is evaluated. o The method was applied on a food industrial district. o Smart multi-energy system solution based on distributed generation.
