

Solar power generation in Hungary

Why is solar power growing in Hungary?

Solar power in Hungary has been rapidly advancing due to government support and declining system prices. By the end of 2022 Hungary had just over 4,000 megawatt (MW) of photovoltaics capacity, a massive increase from a decade prior. Relatedly, solar power produced 12.5% of the country's electricity in 2022, up from less than 0.1% in 2010.

What is Hungary's national energy strategy?

Under Hungary's National Energy Strategy up until 2030, Hungary will aim at ensuring the long-term security of energy supplies and increasing the share of renewable sources in its electricity generation mix, particularly solar photovoltaic, but also notes that fossil fuels, mainly natural gas, will be necessary for future generations.

How much solar power will Hungary produce in 2022?

Relatedly, solar power produced 12.5% of the country's electricity in 2022, up from less than 0.1% in 2010. In 2023, the country's Minister of Energy, Csaba Lantos, predicted Hungary's target for 6,000 MW of PV capacity by 2030 would likely be exceeded twice over, hitting 12,000 MW instead.

How attractive is Hungary for solar photovoltaic (PV) energy investments?

Hungary is ranked among the top 10 countries by attractiveness for solar photovoltaic (PV) energy investments among CEE & SEE countries by Renewable Market Watch in their yearly updated "Attractiveness index for solar photovoltaic (PV) energy investments in CEE & SEE countries in 2022".

Where does solar energy come from in Hungary?

The majority of the power is imported from Slovakia, Austria, and Ukraine, and the main export countries are Croatia and Serbia. Hungary has good potential for the use of solar energy, as the number of sunny hours in Hungary is between 1,950-2,150 per year at an intensity of 1,200 kWh/m² per year.

How can Hungary achieve 90% clean electricity by 2030?

The government has an ambitious target of 90% clean electricity by 2030. Hungary needs to maintain and increase its low carbon generation. Alongside nuclear energy, a diverse renewable energy portfolio and greater power system flexibility for the integration of high shares of solar PV are critical.

Hungary has great potential when it comes to solar power. At present the proportion of renewable energies in electricity generation in Hungary is around 13 percent - with solar energy accounting for only one to two percent. By way of ...

As of the last 12 months, from October 2023 to September 2024, Hungary has been generating electricity with a diverse mix of energy sources. Low-carbon energy sources account for nearly ...

Solar power generation in Hungary

Hungary plans to phase out coal use for electricity generation by 2030, or if possible by 2025 if the government can timely facilitate the "just transition" by shifting direct and indirect jobs in lignite mining and lignite-fired power ...

In 2021, nuclear energy accounted for almost half of electricity generation in Hungary, followed by strong contributions from natural gas (28%), coal (11%) and solar (5%). Among IEA countries, Hungary has the third-highest share of ...

Installation of a 20 MW photovoltaic power plant at the town of Fels?zsolca in Northern Hungary is delivering enough clean energy to meet the annual electricity needs of around 8 000 homes. ...

Solar momentum is building in Hungary with almost 4 GW of generation capacity, more than 2.5 GW of which is from arrays bigger than 50 kW in scale, according to data published in December by the ...

In Hungary, expansion in solar power is a recent phenomenon with the installed capacity approaching 1000 MW by the end of 2019 (Figure 1). This increase has ... solar power ...

In one year, the installed capacity of household-sized solar power plants increased 1.5 times. Last year, around 72,000 households had a small solar power plant with a total capacity of 719 MW, roughly a third of the ...

Data and information about Solar power plants and their location plotted on an interactive map of Hungary. ... Solar Power Plants in Hungary. ... the global electricity generation from solar ...

The Hungarian renewable energy sector has developed recently, mainly focusing on photovoltaic power plants. According to the data publication of the Hungarian transmission systems ...
