

Why should South Africa Invest in alternative energy solutions?

As South Africa looks set for a continuation of an unprecedented level of power outages, many parts of the country are also facing looming threats of water shortages and a major input in electricity generation. Matthew Hall, Chief of Products at Rectron outlines the importance of investing in commercial alternative energy solutions.

Why is solar energy important in South Africa?

Solar energy is a low-cost source of energy compared to traditional non-renewable energy resources in South Africa. The introduction of solar power plants has stimulated the economy and created jobs within the country. South Africa's land cover receives an average of 2,500 hours of sunshine per year.

What is South Africa's just energy transition (JET)?

In 2021, South Africa's Just Energy Transition (JET) was officially launched during COP26. The International Partner Group (IPG), consisting of the European Union, France, Germany, the United Kingdom, and the United States, made a landmark commitment of US\$ 8.5 billion.

Who is Eskom & why is it important to South Africa?

Eskom, South Africa's primary electricity supplier, is heavily involved in this survey. The company plans to use the findings to enhance its future Grid Capacity Connection Assessment and Transmission Development Plan, ensuring the grid can handle the influx of new renewable energy sources.

Are solar systems safe in South Africa?

Many South Africans have embraced solar technology for relief from load-shedding and the massive savings from generating your own clean, free energy. Considering this option, do come with some dangers associated with installing solar systems in homes. However, understanding these potential risks will allow you to plan actionable precautions.

How much carbon does South Africa emit a year?

Increasing extreme weather events due to greenhouse gas emissions from human activity is pushing humanity to a state of crisis, from which many communities may never recover. According to the latest data from the World Bank, South Africa emits 6,7 metric tonnes of carbon per capita each year, compared to 4,3 as the global average.
