Who owns South Korea's power generation capacity?

KEPCO,through its six generating subsidiaries,owns around 70 per cent of the generation capacity,while the remaining capacity is accounted for by independent power producers and community energy systems. Figure 1: South Korea's installed generation capacity,as of early 2024 (%) Total installed capacity = 144.4 GW

Will South Korea's energy transition be economics-driven?

Should the country's energy transition proceed along an economics-driven trajectory- what BNEF calls its Economic Transition Scenario - there would only be an 18% decline over this period. "South Korea still has a chance to meet its 2030 emissions reduction target," said David Kang,BNEF's Head of Japan and Korea Research.

What is Korea's Green Growth Strategy?

In 2010s,Korea's green growth strategy,as a top-down systemdriven by the strong will of its political leader,was hailed as a new growth model (Garbier,2010). It has been considered as a low-carbon transition plan for developing economies that cannot give up economic growth to follow and adapt with climate change.

What are alternative titles for green transition in South Korea?

1 Alternative titles are "Challenging Opportunities in Korean Green Transition" or "Challenges and Opportunities of Green Transitioning in South Korea".

How much did South Korea invest in the energy transition?

South Korea's investment in the energy transition came in at \$25 billionlast year. A clear and consistent policy framework is necessary to boost investor confidence and match the spending needs of a net-zero future.
