

Fuzzy Logic Control for Stand-alone Photovoltaic Energy Conversion System, and Innovation in Renewable Energy. by Zainab Almkhtar Abstract In this dissertation, simulation and hardware emulation was implemented to experiment the operation of a power regulation system for stand-alone PV system with DC loads using Fuzzy Logic Control (FLC).

In this analysis, HOMER provides micro-optimization models of a stand-alone hybrid energy system based on different design parameters such as initial investment, NPC, COE, consumption of energy/fuel, and ...

Different Scenarios for Reducing Carbon Emissions, Optimal Sizing, and Design of a Stand-Alone Hybrid Renewable Energy System for Irrigation Purposes. Hani Al-Rawashdeh, ... Ethiopia: PV-WT-DG-battery: 19.6 kWh/day: ... A renewable energy system must provide the equivalent of 100 kW for 6 hours/day to the farm to replace the power supplied by ...

Flexible renewable energy generating systems are paired with energy storage technology to tackle these issues. The storage systems will ensure that the various customers' access to energy

Analytical model for predicting the performance of photovoltaic array coupled with a wind turbine in a stand-alone renewable energy system based on hydrogen. Renew Energy (2003) ... In most developing countries, the electricity supply system is highly unreliable. Ethiopia is one of the least developed country in the world, and the existing ...

Reducing traditional energy source use led to energy rationing and merging conventional energy systems with renewable systems to create hybrid systems. These hybrid systems have been studied and applied chiefly ...

Different Scenarios for Reducing Carbon Emissions, Optimal Sizing, and Design of a Stand-Alone Hybrid Renewable Energy System for Irrigation Purposes. Hani Al-Rawashdeh, ... Ethiopia: PV-WT-DG-battery: 19.6 ...

Sustainable development consists of economic, society and environment parts that have a close relation with renewable energy. Renewable energy is one of the main factors to reach sustainable development (Omer, 2008). On the contrary, application of renewable energy to reduce environmental issues and global warming is widely reported in the literature.

A hybrid PV-Wind turbine-Biogas generator-fuel cell renewable energy system was proposed and analyzed, so as to find an optimal configuration that can meet the electricity demand (Rad et al., 2019). The results indicated that the cost of energy for the proposed stand-alone system was in the range of \$0.164-0.293/kWh.

# Stand alone renewable energy system Ethiopia

The enormous problems in Ethiopia caused by the shortage of power have been outlined in a previous article [1]. The recurrent droughts, with which the country has long since been associated, and the adversity which has continued unabated, even into the current century, can be said to be directly and/or indirectly attributed to the shortage of power.

The cost of energy for a stand-alone system with reformer was calculated to be 0.164 to 0.233 \$/kWh, while the on-grid system cost of energy was 0.096-0.125 \$/kWh. A review on recent sizing methodologies of hybrid renewable energy systems

This study focuses on the solar PV energy system in rural Ethiopia in conjunction with a battery and a DG for energy storage and backup power supply, respectively and also examines how ...

The facility is aimed at financing renewable energy off-grid solutions through a market development approach by ... stand-alone Solar Home Systems (SHS), mini-grids and other solutions such as solar water pumps. The facility includes: ... off-grid energy solutions in Ethiopia by providing a Line of Credit (LOC) to the Commercial Bank of ...

Mulugetta Y. and Drake F., "Assessment of solar and wind energy resources in Ethiopia: II .Solar energy." EUR, Solar Energy, 1996, Vol. 57, No. 4, pp. 323-334 [7]. Bekele G., Study into the Potential and Feasibility of a Standalone Solar-wind Hybrid Electric Energy Supply System: For Application in Ethiopia.

The paper presents the unit sizing and cost analysis of stand-alone solar-wind hybrid Renewable Energy System (RES) for a typical home in Jaisalmer, Rajasthan. This study was done on solar and wind energy system simulated in MATLAB, which was implemented on datasets captured from RET Screen software for mentioned location.

The major contribution of the current paper is that it presents a comprehensive approach for the Design, Modeling, and Simulation of a Stand-Alone System by integrating renewable and non renewable energy sources to cater for the energy needs of a healthcare center in Ethiopia.
