Can solar PV and hydropower improve the energy situation in Togo?

With a three rounds Delphi method, the study captured the view of key stakeholders on the subject matter. It has been concluded that increasing the share of RE, namely solar PV and hydropower, could significantly improve the energy situation in Togo. This could be through the installation and development of small-scale solar plants and hydropower.

Can Togo achieve universal access to electricity by 2030?

The small West African country plans to achieve universal access to electricity by 2030. Its main challenges are capacity, technology and expertise for generation. To meet demand, Togo has to import most of its energy from Ghana, Cote D'Ivoire and Nigeria. The country's main source of energy is biomass.

What kind of energy does Togo use?

Togo relies on biomass energy 71% (firewood, charcoal, vegetable waste etc.), petroleum products (26%), and electricity (3%) (African Development Bank Group 2015).

Does Togo have a potential for wind energy?

Togo's potential for wind energy is not high. Our study also identified a number of challenges with renewable energy, however. For example, the Togolese government needs to determine the generation potential from various renewable energy sources. The head of a renewable energy research centre said:

Which power plant increases Togo's electricity production capacity?

This power plant increases Togo's electricity production capacity by 50%. Blitta Solar Plant The Sheikh Mohamed Bin Zayed solar power plant or Blitta's solar plant (located in the central region, 262 km from Lomé) was built by AMEA Togo Solar, a subsidiary of AMEA Power, and inaugurated in June 2021.

What will be a new power plant in Togo?

Another addition will be the planned coal-fired thermal power plant, the international and regional connection program with 2 transmission lines of 330 KV and 4 transmission lines of 161 KV, the construction of a 10 MW solar plant in Mango, and 5 MW in Kara (Togo PND 2018).

In Togo, rural electricity projects are steered by the Rural Electrification and Renewable Energy Agency. Several companies, including BBOXX, EDF, and Sun King-Soleva, are actively working to promote universal access to electricity by developing innovative technologies and providing solar energy services to communities not connected to the grid.
