How do photovoltaic systems work?

Photovoltaic systems consist of one or more solar PV panel along with an inverter. Step-by-step guide to how photovoltaic systems work: Solar cells use a semiconductor material - usually silicon - to collect solar energy from the sun's rays.

Are all solar panels the same?

This is where solar panel terminology can become confusing. Solar panel is a general term that often refers to photovoltaic systems and solar panels - but you should know that while all PV systems are solar panels, not all solar panels use PV technology. Here's the difference: Solar PV panels: use the photovoltaic effect.

What is a photovoltaic system?

A photovoltaic system is a system that generates renewable energy via photovoltaic cells and then converts it into usable electricity. Photovoltaic systems consist of one or more solar PV panel along with an inverter. Step-by-step guide to how photovoltaic systems work:

What types of energy can be generated by solar panels?

Two forms of energy can be generated via solar panels - electricity and heat. Solar PV systems work as described above. Solar thermal systems, meanwhile, convert sunlight into heat, and hybrid systems use PV materials, with electricity routed to a hybrid inverter and solar battery.

Why should you install solar panels?

Installing solar panels lets you use free, renewable, low carbon electricity. You can sell surplus electricity to the grid or store it for later use. According to low-carbon certification organisation MCS, there were more than 183,000 solar panel installations across the UK in 2023.

Are solar panels easy to install?

Installing solar panels is usually relatively quick and straightforward, but it's still worth getting to know all the ins and outs of how it happens. After all, considering how much solar panels cost, it makes sense to understand the process.
